A guide  
to keeping  
your kids  
safe

Updated 1/1/2018

## Don't just give your kids the internet; train them to use it.

Technology has advanced beyond belief, and our lives, now more than ever, are affected and influenced by the latest and greatest gadgets.

Along with advances in technology comes access to infinite information, and unless taught appropriate ways to handle that privilege, kids can wander into dangerous places for their impressionable minds.

As a parent, you are responsible for protecting your child's online access.

## Controls for iOS 11

Apple products (phones & tablets) offer several parental control options for iOS 11. We will walk through how to access parental controls, which settings you should change, and how to limit in-app purchases.

### Setting Up Parental Controls

Open the **Settings** app, tap on **General** and scroll down to **Restrictions**.

If you've never accessed this area before, you'll see **Enable Restrictions** at the top. Tap on this to begin setting up parental controls.

When you tap on Enable Restrictions, you'll be asked to create a Restrictions Passcode so that anyone unauthorized won't be able to change these settings.

# How to Set Parental Controls for iOS 11

## What Can You Restrict?

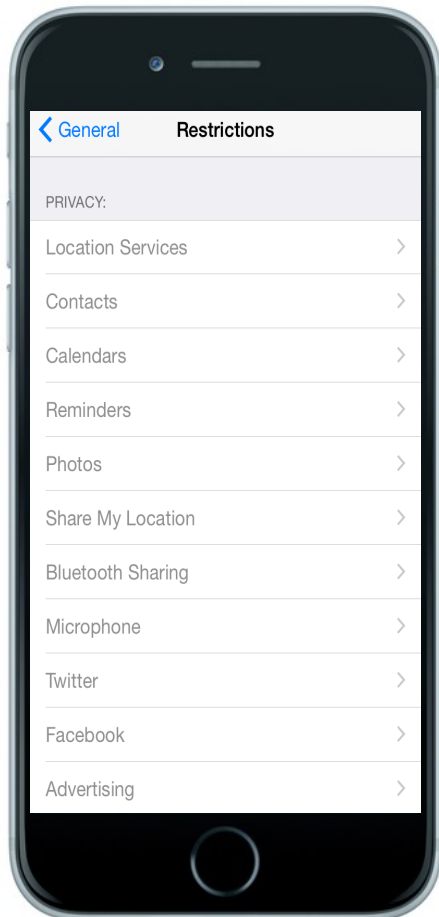

Once your Restrictions Passcode is set, you will be able to see several Apps and features that you can **Allow or Block** access to. You can also prevent your child from installing and/or deleting Apps. Use the toggle switch to adjust these settings.

The next section you will see below the Allow/Block section is **Allowed Content**. Here you can restrict what your child can view based on the rating of a particular movie, TV show, App, or song.

# How to Set Parental Controls for iOS 11

## What Can You Restrict?

The next section you will see is **Privacy**. Here you can choose to allow or block changes to specific areas of your iOS device (For Example: You can change the settings so that the GPS cannot be turned off). Apps and features that allow changes will be shown in the next section, **Allow Changes**. (See picture below)

The last section deals with **Game Center**, which is Apple's centralized gaming hub that keeps track of scores & achievements for compatible games. You can block your child from playing Multiplayer games and/or disable the ability to add friends through Game Center.

*(Because you can communicate with others via Game Center, some parents block this to prevent cyber bullying)*

## Setting Up Parental controls

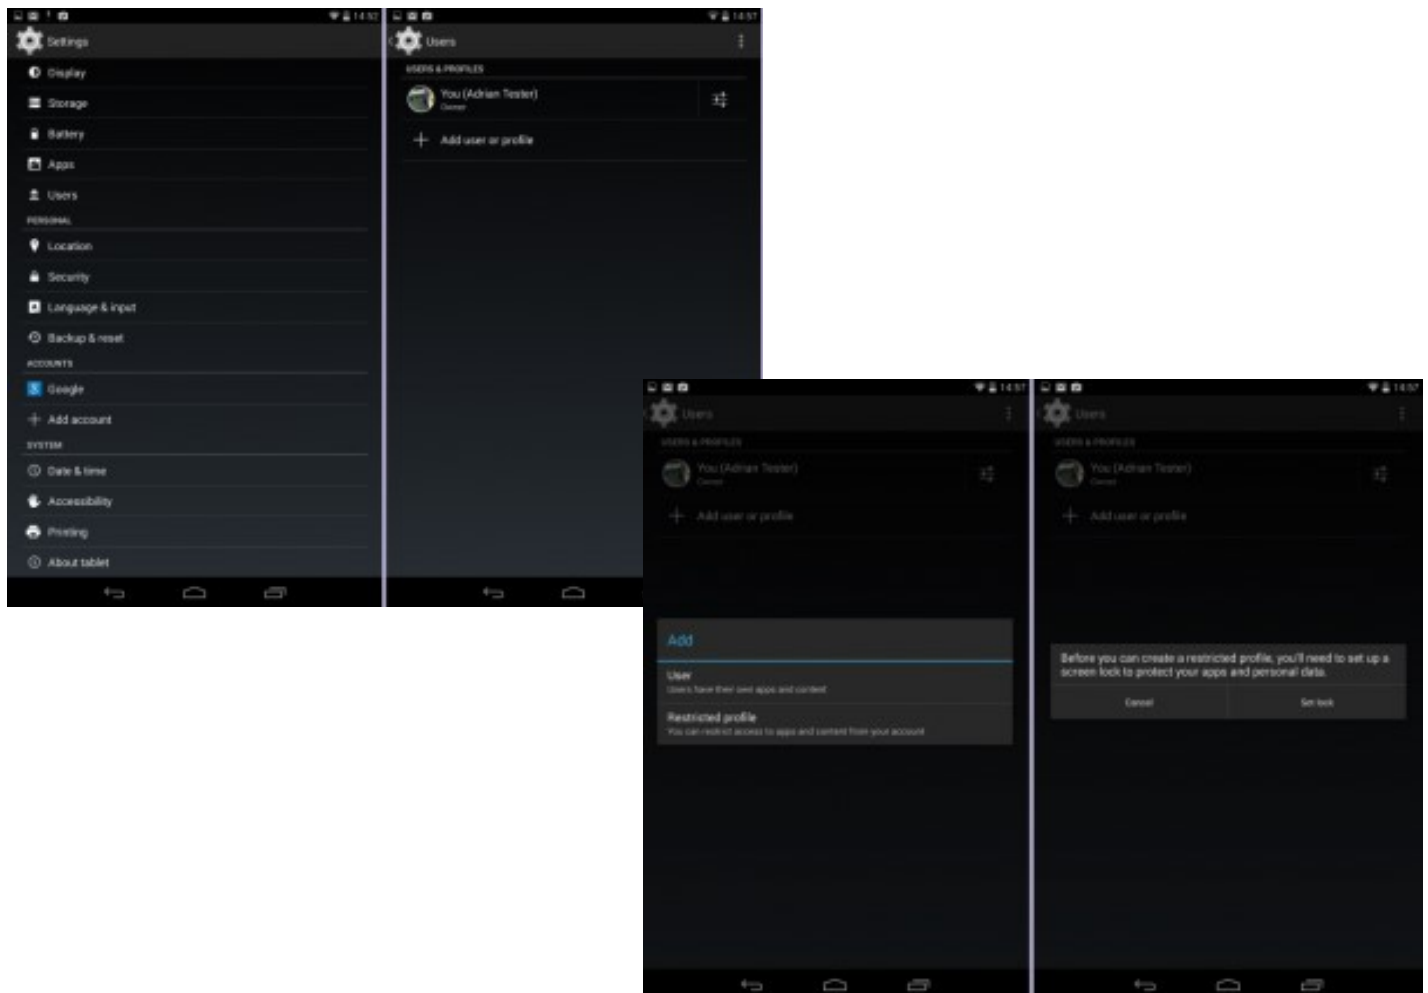

### **Android Tablets**

Your Android tablet should have the power to quickly switch between different user accounts. The main benefit of this is that you can set up one user account for yourself and another for your child to use. In your child's account, you have the ability to restrict individual accounts and block access to certain apps, games, and features.

# How to Set Parental Controls for Android

## Creating Different User Accounts Android Tablets

Open your **Apps List/Menu** and tap on **Settings**. Scroll down and select **Users**. Choose **Add User or Profile**. Since you're setting up a child's account, select **Restricted Profile**. You might be required to set up a PIN or Passcode if you have never done so. This is necessary so that anyone unauthorized won't be able to change these settings.

## Setting Up Parental Controls

### Android Phones

There are different ways to configure parental controls for an Android phone. Some manufacturers (like HTC) supply their own 'kid-mode' software to meet this need, but others do not. Here are some of the basic settings you can change to help keep your phone and your children safe.

From your **Apps List**, open the **Play Store**. Open the **Menu** and select **Settings**. Find the **User Controls** heading and check the box next to **Password**. This option will now prompt you for your Google password each time you (or your children) attempt to make a purchase through the Play Store.

## Setting Up Parental Controls Android Phones

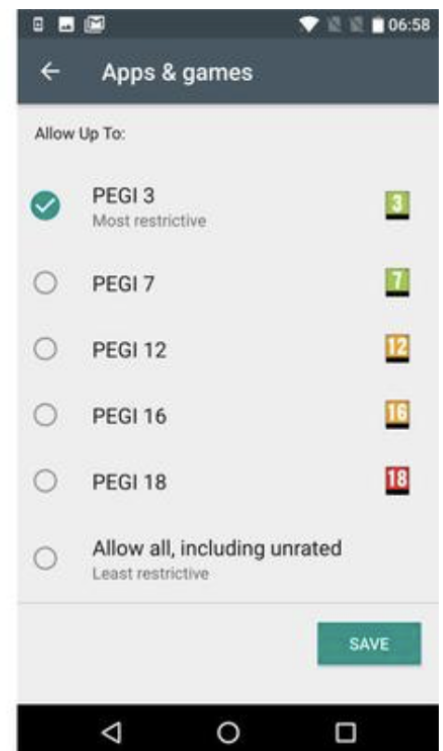

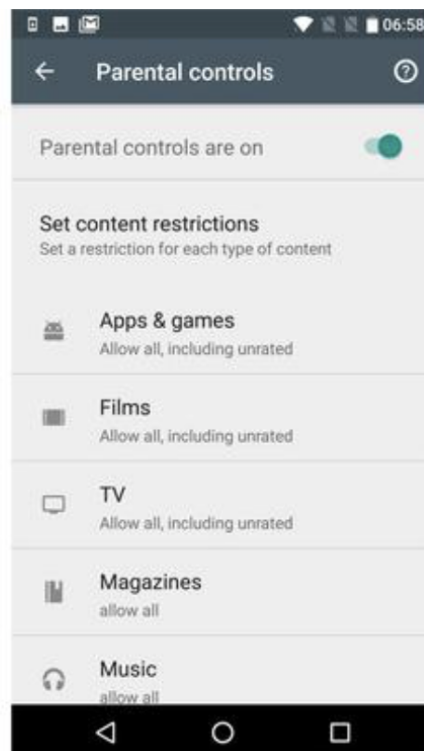

To filter the Play Store to show only apps, music, games, etc. that are appropriate for children:

Open the **Play Store** and press the **Menu** button.

Choose **Settings** and scroll down to the **User Controls**.

Select **Content Filtering/Restrictions**. Here you can set restrictions for apps, games, music, and TV shows based on content rating.

Once you have changed this setting, you will be asked to enter a PIN or Passcode. This is necessary so that anyone unauthorized won't be able to change these settings.
